

# RUNNING ON A DEVICE

Running your app on an iOS device (IRL)

# REGISTER THE DEVICE

- Find it by connecting the device and opening the Xcode organizer
- Send the identifier to Sveinn Fannar ([sveinnk10@ru.is](mailto:sveinnk10@ru.is))
- Include the type of device in the email (iphone 4, ipad 3, etc.)

# GET A CERTIFICATE

- Log into the dev center <https://developer.apple.com/devcenter/ios/index.action>
- Go into the iOS Provisioning Portal
- Go to certificates and request a certificate
- When accepted, download it and add it to the keychain by opening it
- Also download and add the WWDR certificate on the same page

# PROVISIONING PROFILE

- Go to Provisioning in the iOS Provisioning Portal
- Click on the only provisioning profile in the list
  - Make sure your name appears under certificates
  - Make sure your device appears under Devices
- Download the IOS Team Provisioning Profile
- Open it or drag it to the Xcode icon

# RUNNING ON DEVICE

- Connect your device via usb cable
- Open Xcode and select the device name from the scheme list
- Run
